

BUTTERNUT ARELA

A WALTHAM-TYPE BUTTERNUT HYBRID

- Early maturing
- Vigorous plants
- Intermediate resistance to ZYMV
- Good uniformity of size and shape

Type:

A hybrid Waltham-type butternut squash.

Maturity:

85 – 95 days from sowing.

Fruit Characteristics:

Average fruit size of 1.2 - 1.8 Kg. Typical Waltham shape. Very good uniformity of both size and shape. Flesh is a deep orange when fully mature. Small seed cavity.

Plant Characteristics:

A vining type growth habit. Vigorous growth gives good leaf cover of fruit and plants remain active for longer.

Disease Resistance:

Intermediate resistance to ZYMV.

Features & Benefits:

ARELA produces a large proportion of medium-sized fruit. Uniformity of both size and shape is very good. The consistent shape is important in producing an attractive end-product. The plants are very vigorous and remain green and active after most others are in decline. Resistance to ZYMV reduces risk to growers.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
