

WATERMELON CARINA

A LARGE, CRIMSON SWEET TYPE, HYBRID WATERMELON WITH IMPROVED APPEARANCE

- Uniform, oval fruit with dark green rind and crimson red flesh
- Crisp texture, good flavour and brix
- Uniform fruit size of 10kg to 15kg
- Very high yield potential
- Resistant to Fusarium & Anthracnose

Type:

A hybrid Crimson Sweet type watermelon.

Maturity:

Main season 85 - 90 days.

Plant Characteristics:

Vigorous plant with healthy leaf cover and high, uniform yield.

Fruit Characteristics:

Large size, uniform oval-round fruit with weight of 10 - 15kg. The rind has a dark green colour with medium green stripes, and is resistant to sunburn. The flesh has a crimson red colour and crisp texture, with good flavour and brix.

Disease Resistance:

IR: Fusarium (Fon) 0,1 and Anthracnose (Co) 1, 3.

Plant Spacing:

4,000 to 8,000 plants per ha.

Adaption:

CARINA is recommended for main season production.

Pollinator:

Approximately 7 male flowers develop for every female flower. When flowers appear, 2 to 4 bee hives should be placed per ha.

Features & Benefits:

CARINA is very high yielding, with large oval-round fruit of uniform shape and size. The rind is attractively dark green, with medium green stripes, and is resistant to sunburn. The flesh has crimson red colour and crisp texture, with good flavour and brix.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
