

# BUTTERNUT DORADA

## A WALTHAM TYPE BUTTERNUT

- Thick-necked Waltham shaped variety
- Smooth skinned fruit
- Intermediate resistance to ZYMV
- Suitable for processing

### Type:

A thick-necked Waltham-type butternut squash.

### Maturity:

95 days from sowing.

### Fruit Characteristics:

Large uniform fruit suitable for processing.

### Disease resistance:

Intermediate resistance to ZYMV.

### Features & Benefits:

DORADA produces a large proportion of large-sized fruit. Uniformity of both size and shape is very good. The consistent shape is important in producing an attractive end-product. The plants are very vigorous and remain green and active after most others are in decline. Resistance to ZYMV reduces risk to growers.

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
