

WATERMELON ESSENCE

A LARGE TRIPLOID, HYBRID WATERMELON WITH VERY CRISP FLESH, EXCELLENT COLOUR AND TASTE

- Ideal for summer season
- Large, uniform, seedless fruit
- Deep red, very crisp flesh with long shelf life
- High brix and excellent taste
- Very vigorous vines with high yield

Type

A hybrid Triploid watermelon.

Maturity

Main season 90 - 95 days.

Plant Characteristics

Very vigorous plants with healthy leaf cover.

Plant Population: 2,500 to 3,000 plants/ha, grafted on a suitable rootstock. Interplanted with a suitable pollinator variety (833 to 1,500 plants/ha). Total plant population 3,333 to 4,500 plants/ha.

Adaptation: ESSENCE is recommended for main season production.

Variety Characteristics

Fruit Characteristics: Large, uniform, oval fruit with weight of 9 - 12kg. The rind has a dark green colour with irregular, light green stripes. The flesh has deep red colour with very crisp texture, excellent flavour and high brix.

Pollination: A suitable pollinator must be inter-planted at a recommended ratio of 3:1 in the main season, when the conditions are favourable. In the early season and periods of difficult pollination, it is advisable to plant at a ratio of 2:1. Consult our seedless production guidelines for further information.

Features & Benefits

The deep red, very crisp flesh, excellent flavour and high brix delivers excellent eating quality and shelf life. Suitable for whole fruit market and fresh-cut.

Disease Resistance: IR: Px

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
