

CABBAGE GREEN CORONET

FRESH MARKET HYBRID CABBAGE

- Autumn, winter, spring and early summer harvesting
- Very good holding ability
- Excellent bolting tolerance
- Well adapted for different climates with excellent cold tolerance.
- Very good uniformity

Type:

A large headed hybrid cabbage variety for the fresh market. GREEN CORONET shows good adaptability for autumn, winter and spring harvesting slots.

Maturity:

Approximately 120 - 140 days from transplant to maturity in winter and approximately 90 - 110 days in summer. Maturity is very uniform with a high first cut percentage.

Plant Characteristics:

A medium to large frame that provides excellent head protection. Has good heat and cold tolerance. A plant population of 28 000 plants per ha is recommended for single head marketing, and 35-45 000 plants per ha for bags. Plant population will influence head size. For larger head size the plant population should be reduced to suit your needs.

Head Characteristics:

GREEN CORONET has a very firm flat round shaped head with a average head size (without outer frame leaves) of between 3-4 kg with an excellent flavour. An adaptable variety suited for the loose head and bagging market. GREEN CORONET has an excellent dark green colour, a high first cut percentage and good standability.

Disease resistance:

GREEN CORONET has intermediate resistance to Black Rot.

Features & Benefits:

The excellent bolting tolerance lowers the risk associated with producing a high quality crop early in spring.

Fertilization Guidelines:

This is a general guide, grower conditions vary and a soil analysis is highly recommended.

N: 150 to 200kg/ha. 70 to 90 kg/ha incorporated preplant.

Top dress the balance as follows: Summer: 7, 14 and 28 days after transplanting (no later).

Winter: 14, 28 and 45 days from transplant (no later).

P: 50 kg/ha incorporated preplant. K: 120 kg/ha incorporate preplant. Soil pH: 6 - 6,8.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
