

PUMPKIN GREYSTONE

A GREY SEMI-BUSH HYBRID PUMPKIN

- Good storage capabilities
- Excellent yield potential
- Semi-bush growth habit
- A deep-flat fruit with slight ribbing
- Excellent flesh colour and quality

Type:

Grey semi-bush hybrid pumpkin

Maturity:

100 days to maturity.

Plant Characteristics:

A vigorous plant with a semi-bush growth habit. Greystone can be planted at 8000 pl/ha.

Fruit Characteristics:

Medium size grey, average of about 5kg. Deep-flat shape with slight ribbing. It has a green border between skin and flesh. It exhibits tolerance to pinking when stored.

Flesh is thick, deep orange in colour and excellent quality.

Features & Benefits:

Greystone has good general disease resistance. Very high yield capacity. Greystone has a thick skin, deep orange flesh. Greystone exhibits tolerance to its skin turning pink under extended storage conditions.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
