

CARROT LAGUNA

AN EARLY MATURING PRE-PACK HYBRID VARIETY

- Very cylindrical and well-rounded roots
- Very uniform in size and shape
- No green shoulders
- Ideal overwintering and early season variety
- High yielding

Type

F1 Nantes hybrid.

Maturity

90 - 100 days (summer), 100 - 120 days (winter).

Plant Characteristics

Leaf Characteristics: Bright green colour, medium length, upright growth habit with a good attachment.

Root Characteristics: 18 - 20 cm long, cylindrical roots. Bright orange colour, very smooth texture and excellent uniformity.

Variety Characteristics

Bolting: Excellent bolting resistance.

Growing Guidelines: Sowing: Ensure good seedbed preparation prior to sowing. Pre-pack carrots: 1.0 – 1.8 million seeds per hectare. Due to its quick maturity this product should be harvested immediately upon maturity.

Features & Benefits

Market Segment: Fresh and pre-pack markets.

In-situ Storability: Needs to be harvested at maturity.

Disease Resistance: IR: *Alternaria dauci* and Powdery Mildew.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
