

CABBAGE LUNARIA

A LARGE FRAME, ROUND AND ROBUST HYBRID SUMMER CABBAGE

- Round head shape
- Large frame size
- Robust and adaptable to harsh summers
- Field observations indicates good Black rot resistance
- Heads are solid with exceptional hold ability

Type

A large round hybrid cabbage variety.

Maturity

Late maturing. Approximately 95 days from transplant to maturity in summer. Uniform maturity with high first cut percentage.

Plant Characteristics

A large frame with upright leaf habit. A plant population of 28,000 plants per ha is recommended for single head marketing, and 30,000 - 35,000 plants per ha for bags. Plant population will influence head size. For larger head size plant population should be reduced to suit your needs.

Head Characteristics: Lunaria has round/globe shaped heads easily weighing over 4 kg with very solid internal quality.

Variety Characteristics

Fertilization Guidelines: This is a general guide, grower conditions vary, and a soil analysis is highly recommended. N: 150 to 200kg/ha. 70 to 90 kg/ha incorporated preplant.

Top dress the balance as follows:

Summer: 7,14 and 28 days after transplanting (no later). Winter: 14,28 and 45 days from transplant (no later).

P: 50 kg/ha incorporated preplant. K: 120 kg/ha incorporate preplant. Soil pH: 6 - 6,8.

Features & Benefits

Lunaria offers the cabbage grower an attractive large frame hybrid with beautiful round and solid heads, good field hold ability that performs well under Black rot pressure.

Disease Resistance: Very good Black rot resistance under field observation.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
