

LETTUCE MAJOR

A WINTER LETTUCE WITH AN ATTRACTIVE LARGE FRAME

- Suited for winter production in all areas
- 60 - 90 days from transplant to maturity
- Excellent head cover ensures protection from frost damage
- The head sits high off the ground to reducing bottom rot
- Performs well in the recommended season

Type:

MAJOR is a Crisphead type winter lettuce suited for fresh, processor and pre-pack markets.

Maturity:

60 - 90 days from transplant.

Plant Characteristics:

Large frame with deep green colour. A plant population of between 40,000 - 60,000 plants per hectare is recommended.

Features & Benefits:

Excellent cold tolerance with high yield potential.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
