

# ONION OLIVINE

## VERY LATE MATURING INTERMEDIATE DAY HYBRID ONION WITH EXCELLENT STORAGE

- Excellent skin retention
- Very late maturing intermediate day hybrid
- Very good vigour as seedling and transplants
- Machine harvestable
- Storability: 6 - 9 months

### Market Aim:

Storage market and export.

### Storability:

6 - 9 months.

### Taste:

Pungent.

### Bulb shape:

Globe.

### Bulb size:

Medium to large (60 - 100mm).

### Skin Quality:

Excellent skin retention, multiple thin skins.

### Plant Characteristics:

A very late maturing brown intermediate day hybrid onion. Very hard, globe shape bulbs with dark brown colour. Excellent yield potential and good general foliage disease resistance. Very long storage potential. Machine harvestable.

### Disease Resistance:

Good general foliage disease resistance.

### Features & Benefits:

Very late maturing brown intermediate day onion with excellent storage.

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
