

LETTUCE PLUSKIN

CRISPHEAD LETTUCE FOR SHOULDER AND SUMMER SLOTS

- Suited for open field and hydroponic production
- Quick maturing, harvest between 45 – 55 days
- Uniform growth with reduced ribbing
- Strong Bremia resistance (BL16 – 36 EU)
- Resistance to *Nasonovia ribisnigri*

Type:

PLUSKIN is a crisphead lettuce suited for open field and hydroponic production for the fresh and pre-pack market.

Maturity:

45 - 55 days from transplant to harvest.

Plant Characteristics:

Medium frame with medium to large heads. Excellent uniformity with reduced ribbing and good internal quality. Variety works well in hydroponic systems.

Disease Resistance:

Strong Bremia resistance (BL16 – 36 EU) and *Nasonovia ribisnigri* resistance.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
