

# HUBBARD SQUASH RELIANCE

## A HYBRID HUBBARD SQUASH WITH IMPROVED YIELD

- Thick flesh
- Smoother skin
- Compact growth habit
- Improved uniformity of fruit size

### Type:

Hybrid Hubbard squash.

### Maturity:

90 days in summer.

### Plant Characteristics:

A more compact plant than standards. Higher populations are possible resulting in more fruit per unit area.

### Fruit Characteristics:

Large, uniform fruit, 5 – 6 Kg in weight. A dark green skin with thick, deep orange flesh. Particularly thick neck flesh. Skin is smoother than standard Hubbards.

### Features & Benefits:

Increased yield potential particularly in winter plantings. Quicker to mature than standard Hubbards. Good size uniformity makes packing easier and gives an attractive product. Thin skin and thick flesh gives a higher flesh recovery rate.

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
