

# CABBAGE STAR 3311

## AN EARLY MATURING HYBRID CABBAGE FOR SUMMER PRODUCTION

- Very good heat tolerance
- Firm internal texture
- Excellent uniformity with high yield potential
- Early maturing

### Type

Type A large headed hybrid cabbage variety for the fresh market. STAR 3311 has been introduced specifically for the areas where Black Rot is a serious problem.

### Maturity

Early maturing. Approximately 75 - 85 days from transplant to maturity in summer. Maturity is very uniform with a high first cut percentage.

### Plant Characteristics

A medium to large frame that has an upright leaf habit. A plant population of 28,000 plants per ha is recommended for single head marketing, and 35,000 - 40,000 plants per ha for bags. Plant population will influence head size. For larger head size the plant population should be reduced to suit your needs.

**Head Characteristics:** STAR 3311 has very firm flat-round shaped heads with an average head size (without frame leaves) of between 2,5 - 3,0 kg with an excellent flavour. The colour of STAR 3311 is a typical grey-green which is highly sought after by market agents and hawkers. Care should be taken not to let the crop mature past the optimal period to prevent splitting. STAR 3311 has a very high first cut percentage.

### Variety Characteristics

**Fertilization Guidelines:** This is a general guide, grower conditions vary and a soil analysis is highly recommended:

N: 150 to 200kg/ha. 70 to 90 kg/ha incorporated preplant.

Top dress the balance as follows:

Summer: 7,14 and 28 days after transplanting (no later).

Winter: 14,28 and 45 days from transplant (no later).

P: 50 kg/ha incorporated preplant. K: 120 kg/ha incorporate preplant. Soil pH: 6 - 6,8.

### Features & Benefits

The combination of early maturity, excellent Black Rot resistance and a vigorous seedling, contribute to the improvement in crop security that STAR 3311 offers the grower.

**Disease Resistance:** STAR 3311 has shown good field resistance to black rot.

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
