

GEM SQUASH STAR 8001

A GEM SQUASH HYBRID

- Early maturity
- Dark skin colour
- Short internodes
- High yield of uniform fruit

Type:

A Gem Squash hybrid.

Maturity:

Early maturing. Approximately 50 - 60 days to maturity for Baby Gems, and 70 - 80 days for mature fruit.

Plant Characteristics:

A vigorous and productive plant with short internodes. Shorter vines allow higher plant densities and easier management in early crop stages.

Fruit Characteristics:

Round, dark green fruit with a small blossom end scar. Fruit are round from a very small size making STAR 8001 a very good choice for baby gem squash production.

Yield Potential:

High with the potential to set fruit at each node. Early maturity and suitability of small fruit for the baby market offer flexibility in marketing strategy.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
