

ROOTSTOCK SHINTOSA CAMELFORCE

CAMELFORCE ROOTSTOCK IS A ROBUST AND INNOVATIVE ROOTSTOCK VARIETY DESIGNED FOR WATERMELON, MELON AND CUCUMBER

- Cucurbita hybrid (*C. maxima* x *C. moschata*)
- Strong disease resistance
- Powerhouse root system
- To optimise and improve fruit quality and yield
- Very adaptable

Type

Cucurbita hybrid (*C. maxima* x *C. moschata*).

Plant Characteristics

- Very adaptable to different kinds of stress e.g. cold weather, overly wet or dry soils, exhausted soil, or soil with poor structure.
- High Resistance to Fusarium (Fon: 0,1,2 and Fom: 0,1,2), Verticillium and other soil fungus diseases.
- Powerful root system that is very well balanced with the foliage of the scion.

Variety Characteristics

Vigorous root generation capability which results in higher yield, extended crop cycle and improved fruit quality.

Disease Resistance

Fon: 0,1,2 (Fusarium wilt in melons)
Fom: 0,1,2 (Fusarium wilt in watermelons)
Vd: Verticillium
Foc: Fusarium oxysporum

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
