

CARROT SUBITO

A VERSATILE HYBRID VARIETY FOR SUMMER AND WINTER SOWING

- Excellent uniformity
- Very good smoothness
- Cylindrical root with good size
- Very high yield
- Medium maturing

Type
F1 Nantes hybrid.
Maturity
100 - 110 days (summer), 120 - 130 days (winter).
Plant Characteristics
Leaf Characteristics: Medium green colour, medium length, very upright growth habit with a strong attachment. Root Characteristics: 18 - 21 cm root length, cylindrical with well-rounded tip shape, bright orange colour, smooth texture and excellent uniformity.
Variety Characteristics
Bolting: Excellent bolting resistance. Growing Guidelines: Sowing: Ensure good seedbed preparation prior to sowing. Pre-pack carrots: 1.0 – 1.8 million seeds per hectare.
Features & Benefits
High yielding with long roots and excellent shape. Market Segment: Fresh market, pre-pack and bunching markets. In-situ Storability: Good storability. Disease Resistance: IR: <i>Alternaria dauci</i>

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
