

LETTUCE SUNLINE

CRISPHEAD LETTUCE FOR SUMMER SLOTS WITH SUPERIOR BOLTING TOLERANCE, SUITED FOR HYDROPONICS

- Superior bolting tolerance
- Suited for hydroponics
- Maturing between 50 – 60 days after transplant
- Uniform growth with reduced ribbing
- Good heat and tip burn tolerance

Type:

SUNLINE is a crisphead type summer lettuce suited for open field and hydroponic production for the fresh and prepack market.

Maturity:

50-60 days from transplant in open field

Plant Characteristics:

Medium to large frame with good head size. Variety works well in hydroponic systems.

Features & Benefits:

SUNLINE has good heat tolerance and can handle hot conditions with low risk for detrimental effects. Great uniformity with a compact, flat round head shape, reduced ribbing and good internal quality. Produces high quality heads.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
