

CARROT TATIANA

A BRAZILIAN TYPE HYBRID VARIETY WITH GOOD LEAF DISEASE RESISTANCE

- Good seedling vigour
- Strong, upright foliage
- Very high yielding
- Good texture and length
- Excellent attachment strength

Type

F1 Nantes hybrid.

Maturity

110 - 120 days (summer), 120 - 130 days (winter).

Plant Characteristics

Leaf Characteristics: Dark green colour, long length, upright growth habit with a very strong attachment.

Root Characteristics: 18 - 20 cm root length, cylindrical root shape, bright orange colour, smooth texture and good uniformity.

Variety Characteristics

Bolting: High resistance for summer sowings.

Growing Guidelines: Sowing: Ensure good seedbed preparation prior to sowing. Pre-pack carrots: 1.0 – 1.8 million seeds per hectare.

Features & Benefits

Very high yielding for mid to late summer plantings.

Market Segment: Fresh market, pre-pack and bunching markets.

In-situ Storability: Needs to be harvested at maturity.

Disease Resistance: HR: *Alternaria dauci*

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
