

WATERMELON TIGER-F1

A LARGE JUBILEE TYPE, HYBRID WATERMELON WITH EXCELLENT TASTE

- Very early maturity
- Medium to large, uniform fruit
- Bright red flesh colour and high brix
- Good transportability
- High yielding with strong vines

Type

A hybrid Jubilee type watermelon.

Maturity

Main season 75 – 80 days.

Plant Characteristics

Vigorous plants with high, uniform yield, and stable fruit size. Healthy leaf cover that protects the fruit against sunburn.

Plant Population: 3,000 to 4,000 plants per ha for dry land plantings. 6,000 to 8,000 plants per ha for irrigated plantings.

Adaption: TIGER-F1 is recommended for early and main season production.

Variety Characteristics

Fruit Characteristics: Medium to large uniform, elongated fruit with weight of 9 - 12kg. The rind has a light green colour with dark green stripes. The flesh has a bright red colour, with firm texture, and good flavour and brix.

Pollination: Approximately 7 male flowers develop for every female flower. When flowers appear, 2 to 4 bee hives should be placed per ha.

Features & Benefits

TIGER-F1 is very early maturing and well adapted to various growing conditions, producing high yield of uniform, high quality fruit.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
