

PUMPKIN WARRIOR

A GREY HYBRID PUMPKIN

- Semi-bush growth habit
- Uniform fruit with light skin colour
- Thick deep orange flesh
- Early maturing

Type:

A grey hybrid pumpkin with a vining growth habit.

Maturity:

90 days in summer, 100 - 110 days in cool winters. WARRIOR should only be harvested once the fruit stem develops cork-like cracks and loses most of its' green colour. Storage for 2 weeks after harvest will result in darker flesh and less under-skin greening.

Plant Characteristics:

Semi-bush growth habit. Can be planted up to 7,000 plants per hectare. Quick maturing.

Fruit Characteristics:

Large, deep-flat, light grey fruit. Average size of 5kg with slight ribbing. Small seed cavity, thick shoulder flesh and small blossom-end scar. Very good size to weight ratio. Light skin colour makes WARRIOR less prone to sunburn than some other varieties. Flesh is deep orange, thick and very firm, with excellent keeping quality.

Yield Potential:

High.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
